**Declaration concerning formaldehyde
CARB II respectively TSCA Title VI**

Dear Ladies, dear Sirs,

thank you very much for your inquiry.

The California Air Resources Board (CARB) and TSCA Title VI have limited the formaldehyde emission to a maximum value of 0.05 ppm. **This value is equivalent to one half of the European E1 value.**

We are hereby confirming that the adhesive brands "Jowatherm", "Jowat-Toptherm" and "Jowatherm-Reaktant" do not contain formaldehyde.

As a result, the adhesive **Jowatherm-Reaktant 608.00** fulfills the above mentioned regulations.

This confirmation is made with the following provisos:

- a) The pollutants indicated may be contained in our adhesives in quantities below the analytical limit of detection.
- b) It is impossible to exclude that pollutants which are ubiquitous may also be found in our adhesives.

Please feel free to contact us any time you have further questions, with best regards

Jowat SE
